

EOS Data Component

Your weekly pulse check. Know your numbers. Run your business.

The Scorecard — Your Weekly Pulse

- 5-15 numbers max that tell you if your business had a good week
- Every number has ONE owner (not two people, not 'the team')
- Every number has a weekly goal that resets each week
- 13 weeks of trailing data so you see trends, not just snapshots
- Reviewed every week in your L10 — if off, it drops to the Issues List

Leading vs. Lagging

Your P&L = stepping on a scale
Tells you what already happened.
By the time it shows a problem,
it's too late.

Scorecard = tracking calories & steps
Track activities, not just results.
Proposals sent > Revenue earned.
Jobs started > Backlog reported.

Find Your One Number

Every business has one number
that tells you everything.

Contractor: backlog in months.
Above 4 months = healthy.
Below 3 = something broke.

What's YOUR one number?
The one that, if it's right,
everything else is probably fine.

Everyone Gets a Measurable

The Scorecard is leadership's numbers. Measurables cascade to every seat.
PM: projects on schedule | Estimator: estimates in 48 hrs | AR: 30-day collections
When everyone has a number, everyone knows what 'winning' looks like.
No ambiguity. No subjectivity. Just clear, weekly accountability.

Red Flags — Your Scorecard Is Broken If...

- Tracking vanity metrics that feel good but don't drive decisions
- 30+ numbers — that's a spreadsheet, not a management tool
- Goals are too easy — nothing ever shows as 'off track'
- Not reviewing weekly in the L10 — it becomes shelfware
- Hasn't surfaced an issue in a month — numbers or goals are wrong

Sample Scorecard Structure

Owner	Measurable	Goal	W1	W2	W3	W4	W5	W6
Sarah	Proposals sent	15/wk	17	14	16	12	15	18
Mike	Jobs started	4/wk	5	3	4	4	2	5
Tom	AR collected (\$K)	200	210	185	220	195	170	205

"Data doesn't replace your gut. It confirms it or challenges it.
Either way, you make better decisions."
