

VITO — Vision/Traction Organizer

Apex Commercial Contractors

PAGE 1: VISION

Where are we going?

1. Core Values

#	Core Value	Definition
1	Own It	Take accountability for your work, your team, and your results. No excuses. No finger-pointing.
2	Do What You Say	Follow through on every commitment — to clients, to subs, to each other. Your word is your bond.
3	Team First	Company over ego. Share knowledge. Support each other. Win together.
4	Get It Done	Bias toward action. Solve problems, don't just identify them. Move the ball forward every day.
5	Safety Always	No shortcuts. No exceptions. Everyone goes home the way they came in.

2. Core Focus

Purpose / Cause / Passion: To build the communities we live in — structures that outlast us and serve the people who use them.

Niche: Ground-up commercial construction, 2M–25M projects, Southeast United States. We specialize in healthcare, mixed-use, and retail. We do not pursue residential. We do not pursue industrial. We do not chase work outside our geography regardless of the relationship.

3. 10-Year Target

***\$100M in annual revenue** with 12% net profit as the premier commercial general contractor in the Southeast for healthcare and mixed-use projects. 200+ employees. \$50M single-project bonding capacity. The company operates with **less than 5% owner involvement in daily operations**. A reputation that attracts top talent and repeat clients without the owner selling every job.*

4. Marketing Strategy

Target Market: Private developers and healthcare systems building ground-up commercial projects in the 2M–25M range across the Southeast US.

Three Uniques:

#	Unique	Description
1	On-Time Delivery	We deliver on schedule. Period. Our track record proves it.
2	In-House Preconstruction	We estimate, value-engineer, and plan in-house — no outsourced guesswork.
3	Owner-Direct Communication	The owner of our company is accessible to the owner of yours. Always.

Proven Process: Preconstruction → Budgeting & Value Engineering → Subcontractor Procurement → Construction Execution → Weekly Owner Updates → Punch List & Closeout → Warranty Period

Guarantee: Guaranteed Maximum Price with open-book accounting. You see every dollar. No surprises.

PAGE 2: TRACTION

How are we going to get there?

5. 3-Year Picture (By End of 2028)

To get from 25M today to 100M in 10 years, we must be at \$50M in 3 years. Here is what that looks like:

Category	Target	Connection to 10-Year
Revenue	\$50M annually	Halfway to \$100M target
Net Profit Margin	8% (\$4M net)	Building toward 12% at scale
Employees	75 full-time	Scaling toward 200+
Leadership Team	VP of Ops, VP of Estimating/BD, Controller — all seats filled, owner out of daily ops	Foundation for owner at <5% daily involvement
Healthcare Division	Generating 30% of revenue (\$15M)	Building the healthcare specialty that defines the brand at \$100M
Backlog	Minimum 12 months contracted	Pipeline stability for sustained growth
Bonding Capacity	25M <i>single project</i> / 75M aggregate	Scaling toward \$50M single-project capacity
Technology	Procore deployed 100%, weekly job cost reporting on every project	Systems that allow the business to run without owner in every decision
Safety	EMR at 0.85 or below	Reputation and prequalification standard for healthcare/institutional work
Bid-Hit Rate	30%	Efficient estimating machine — not bidding everything, winning what we bid

6. 1-Year Plan (2026 Goals)

To get from 25M today to 50M in 3 years, here is what must be accomplished THIS year:

#	1-Year Goal	Measurable Target	How It Pulls Toward 3-Year
1	Grow revenue to \$30M	\$30M billed by Dec 31, 2026	25M → 30M is the first step toward 50M. <i>Requires winning 32M+</i> in new contracts this year (accounting for carryover backlog).
2	Hire VP of Operations	Full-time, onboarded, running day-to-day by Q3	Owner must exit the Ops seat to build the leadership team required at \$50M. This is the first and most critical hire.
3	Win 3 healthcare projects	3 contracts executed, construction started on at least 1	Healthcare must be 30% of revenue at \$50M. We need to start building the portfolio and track record NOW.
4	Achieve 25% bid-hit rate	Rolling 12-month average	Currently at 18%. Must improve estimating quality and target selection to reach 30% at \$50M.
5	Achieve 7% net profit margin	7% net on 30M = 2.1M	Currently at 5.2%. Must tighten job costing, collections, and CO management to build toward 8% at \$50M.
6	Reduce project closeout to 45 days	Average closeout time from substantial completion to final payment	Currently 90 days. Retainage and final billing sitting uncollected kills cash flow. Must be systemized.
7	Implement ALP/EOS company-wide	VITO complete, Accountability Chart built, Scorecard running, L10s weekly for 40+ weeks	The operating system must be installed this year so the company can scale to \$50M on systems, not on the owner.

7. Quarterly Rocks (Q2 2026 — April through June)

These are the specific things that must get done in the next 90 days to stay on track for the 1-Year Goals. Each rock is directly derived from a 1-year goal.

#	Rock	Owner	Derived From 1-Year Goal	Measurable Completion
1	Submit 12 bids this quarter (4/month), targeting \$40M+ in total bid volume	VP Estimating	Goal #1 (Revenue \$30M) — To hit 30M, <i>weneed</i> 32M+ in new awards. At a 25% hit rate, that means ~ 128M in bids for the year = 32M/quarter in bid volume. 12 bids averaging \$3.3M each.	12 bids submitted by June 30
2	Close and execute contracts on \$8M in new work this quarter	CEO (Owner)	Goal #1 (Revenue \$30M) — 30M requires winning 8M/quarter in new contracts to maintain backlog and hit the annual number.	\$8M in signed contracts by June 30
3	Post VP of Ops job listing, interview minimum 5 qualified candidates, extend offer	CEO (Owner)	Goal #2 (Hire VP of Ops) — VP must be onboarded by Q3. That means offer accepted by end of Q2 so onboarding happens in Q3.	Offer extended and accepted by June 30
4	Submit bids on 4 healthcare-specific projects this quarter	VP Estimating	Goal #3 (Win 3 Healthcare Projects) — Need to win 3 for the year. At 25% hit rate, need to bid ~12 healthcare projects. 4 per quarter.	4 healthcare bids submitted by June 30
5	Implement weekly job cost variance reporting on all active projects	Controller	Goal #5 (7% Net Margin) — Can't improve margin without real-time visibility. Weekly job cost reporting catches margin erosion before it's too late.	All active projects reporting weekly by June 30

#	Rock	Owner	Derived From 1-Year Goal	Measurable Completion
6	Complete closeout on 3 lingering 2025 projects — final billing submitted, retainage collected	Senior PM	Goal #6 (Closeout to 45 Days) — Clear the backlog of old closeouts and establish the new 45-day standard. Collect the cash sitting in retainage.	3 projects fully closed, retainage collected by June 30
7	Run weekly L10 meetings for 12 consecutive weeks with full leadership team	CEO (Owner)	Goal #7 (Implement ALP/EOS) — The L10 is the heartbeat of the system. 12 consecutive weeks builds the habit. Miss one and the rhythm breaks.	12 L10s completed by June 30

How Q2 Rocks connect to the full year: If we execute these 7 rocks in Q2, we enter Q3 with $8M + \text{in new contract signed (on pace for 30M)}$, a VP of Ops offer accepted (onboarding in Q3), healthcare bids in the pipeline, job cost reporting live (protecting margin), old projects closed out (cash collected), and the L10 rhythm established. Q3 rocks will then focus on onboarding the VP of Ops, closing healthcare contracts, refining the bid-hit rate, and documenting core processes. Each quarter builds on the last. The byproduct of four quarters of rocks IS the 1-Year Plan achieved.

8. Issues List

#	Issue
1	PM turnover — lost 2 PMs in the last 12 months. Root cause unknown.
2	Estimating bottleneck — all bids funnel through one person. No redundancy.
3	No dedicated Safety Director — relying on superintendents to manage safety.
4	Subcontractor pricing increasing 10–15% — squeezing margins on hard-bid work.
5	AR collections process is informal — no system, no accountability, no follow-up cadence.
6	Owner is still sitting in VP Ops seat, VP Estimating seat, and CEO seat simultaneously.
7	No documented core processes — everything lives in people’s heads.
8	Carlos (Lead Estimator) — core values misalignment identified. Decision pending.

“Every person on your leadership team should be able to recite these answers. If they can’t, you don’t have alignment — you have assumptions.”
